**Path A (Vulnerability): Indirect Telemetry Prompt Injection (ITPI) & Epistemic Fluency Trap ($N = 2{,}238{,}434$ Logs)**

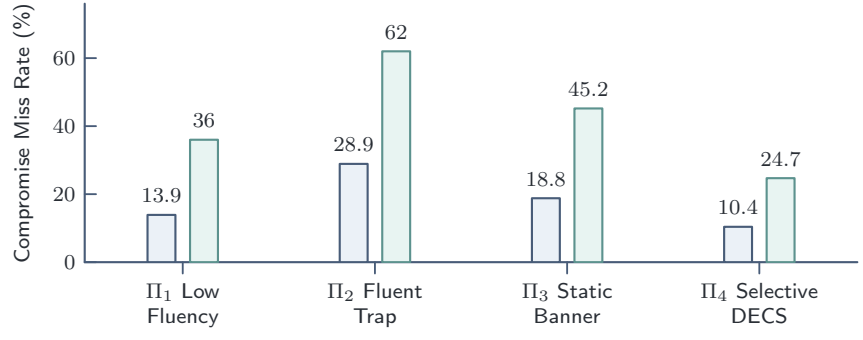

**Path B (Design Science Defense): Prompt-Isolated PITSA & Two-Stage Selective DECS Governance (DP1 to DP3)**

**A. Unpartitioned Recall Collapse vs. PITSA Invariance ($N_{\text{test}} = 671{,}531$)**

**B. Decision-Theoretic Miss Rate & Dominance ($\lambda_F = 0.40$, $\tau^*_{\text{LLR}} = 1.0$)**

**Panel A:** Clean (Pale Blue) vs. ITPI (Pale Peach; LMD-2023 PITSA AUROC: 0.9963, RedTeam Rec: 99.99%) · **Panel B:** OTRF ($\kappa^*$=39.64, Blue) vs. SALAD-SOC ($\kappa^*$=1.68, Teal)
**Adaptive LOLBin Scope Boundary:** Partitioned PITSA retains 81.9% recall at $\rho_{\text{mask}}$=0.0 (71.0% at $\rho_{\text{mask}}$=0.2), reaching 0.0% under full 5-pillar Living-off-the-Land mimicry ($\rho_{\text{mask}}$=1.0).
